

Do you need to PURIFY?

How can purification support your body?

The Standard Process Purification Program is designed to support specific organs involved in the body's detoxification process—the liver, kidneys, and intestines. What do your liver, kidneys, and intestines do?*

Liver

- Filters natural toxins
- Aids the body in metabolizing fat, protein, and carbohydrates
- Helps transform many natural toxins to limit impact and prepare for excretion

Kidneys

- Filter waste and excess fluid from the blood
- Regulate and release the right balance of sodium, phosphorus, and potassium for the body to function properly

Large Intestine

- Absorbs water and electrolytes, forming waste that is excreted from the body
- Contains bacteria that make short-chain fatty acids and some vitamins for extra nutritional support

Small Intestine

- Digests food and absorbs nutrients for the body to use
- Provides a barrier that blocks naturally occurring toxins from the rest of the body
- Regulates immune system action at the gastrointestinal level

What's your toxic load?

If you consume or are exposed to these things, consider purification:
