## Gold Patch

Gold Patch is a topically applied product that removes nodules and stasis. It helps dissolve cell masses due to hardened plaque, scars, or protein deposits in the tissue as well as abnormal cell growth by activating cell mediated immune function.

### 1. Dupuytren Contracture

Dupuytren contracture is a condition in which one or more fingers bend toward the palm of the hand caused by nodules from abnormal myofibroblastic growth in the palm. The nodules eventually progress to thick and hard cords that can pull the fingers toward the palm. It most often affects the two fingers farthest from the thumb.

The Gold Patch helps reduce cytokine level and myofibroblastic growth to remove the myofibroblasts, nodule, and tension and help the finger resume its normal functionality. Patients can experience symptom improvements in 4 to 6 weeks and 3-5 months of the protocol is recommended for significant improvement.

### 2. Tissue Scarring

Scar tissue can form as the body heals an injury due to fibrous connective tissue build up. While a cutaneous scarring can cause a psychological concern and physical pain, an internal scar, sometimes, can become extremely painful. In some patients, scar tissue can, depending on the location, grow and attach itself to another internal part of the body and therefore push or pull the blood vessel and affect blood circulation causing organ function reduction or failure. The scar tissue in the neck can pull the carotid artery causing reduced blood circulation to the brain. This can lead to the development of early dementia.

Myofibroblasts can be found in the scar tissue which helps speed wound repair by contracting the edges of the wound. After healing is complete, these myofibroblasts cells are usually lost through apoptosis. Apoptosis is a form of programmed cell death or "cellular suicide" which occurs as a normal and controlled part of an organism's growth or development. However, it has been found that in several fibrotic diseases or in wounds that fail to resolve, this mechanism fails to work. Myofibroblasts may persist leading to expansion of the extracellular matrix with contraction.

The Gold Patch helps reduce cytokine level and myofibroblastic growth to remove the myofibroblasts and dissolve the scar tissue. Patients can experience symptom improvements in 4 to 6 weeks and 3-5 months of the protocol is recommended for significant improvement.

### 3. Tumor, Cancer and Abnormal Cell Growth

A tumor is a mass of abnormal cells that form in the body. The body is constantly making new cells to replace old or damaged ones that die off through apoptosis. Sometimes, the cells don't die off as expected, then our immune system can recognize and kill abnormal cells. However, if the immune system fails to recognize and kill the abnormal cells, the cells start to pile up, forming a tumor. Benign tumors are not cancerous. Malignant or cancerous tumors are abnormal cells that divide uncontrollably and have the ability to infiltrate and spread into nearby tissue, glands and other parts of the body. Patients may

experience symptoms of fatigue, fever or chills, poor appertite with unexplained weight loss, night sweats, and body pain.

The Gold Patch helps reduce cytokine level and increase immune system function to help kill the abnormal cells and remove tumor or cancerous cells. Bitter is required to prevent an immune over reaction to the fragments and debris released from tissue breakdown. Sona and Breez is required to enhance lymph node function for effective processing of cellular fragments and debris. Brown and LC Balancer are required to help the liver and kidney effectively process and remove metabolic wastes. If patients also have poor kidney function, a low dose Xcel is recommended. Patients can experience improvements in 4 to 6 weeks and 3-5 months of the protocol is recommended for significant improvement. If the tumor or cancer cells are not under the skin, Gold Formula is recommended.

**Suggested Usage:** Apply the patch to the affected area. Keep it on for 48 hours. Take a 24-hour break before applying a new patch.

**Available Size:**

Small (1.0" x 0.75")

Medium (2.0" x 1.5")

Large (3.5" x 4.5")

**Ingredients:** Cortex Cinnamomi, Concha Haliotidis, Concha Margaritifera Usta, Concha Meretricis Seu Cyclinae, Concha Ostreae, Cortex Moutan, Cortex Periplocae, Flos Carthami, Fructus Chaenomelis, Lignum Pini Nodi, Lignum Sappan, Margarita, Myrrha, Poria, Radix Achranthis Bidentatae, Radix Aconiti Kusnezoffii, Preparata, Radix Angelicae Pubescentis, Radix Angelicae Sinensis, Radix Bupleuri, Radix Dipsaci, Radix Paeoniae Rubra, Radix Salviae Miltiorrhizae, Ramulus Cinnamomi, Resina Ferulae, Rhizoma Alpiniae Officinarum, Rhizoma Chuanxiong, Rhizoma Curcumae, Rhizoma Seu Radix Notopterygii, Rhizoma Spargani, Semen Citri Reticulatae, Semen Persicae, Thallus Laminariae

**Pinyin Name:** Awei, Chaihu, Chishao, Chuanxiong, Danggui, Danshen, Duhuo, Eshu, Fuling, Gaoliangjiang, Geqiao, Guizhi, Honghua, Juhe, Kunbu, Moyao, Mudanpi, Mugua, Muli, Nuixi, Qianghuo, Rougui, Sanleng, Shijueming, Sumu, Taoren, Xiangjiapi, Xuduan, Yousongjie, Zhenzhu, Zhenzumu, Zhicaowu
