# HOW CAN WEI LABS HELP WITH DUPUYTREN CONTRACTURE?

Dupuytren contracture is a condition in which one or more fingers bend toward the palm of the hand caused by nodules from abnormal myofibroblastic growth in the palm. The nodules eventually progress to thick and hard cords that can pull the fingers toward the palm.

Wei Labs Gold Patch works to:

- Break down factors that cause nodule formation\*
- Reduce myofibroblast concentration to eliminate the rope like cord that forms in the palm\*
- Decrease collagen expression and tension\*

## HIGHLIGHTED HERBS

### ECKLONIA

- Reduces inflammation
- Relieves cellular fibrotic activities
- Significantly suppresses levels of collagen

### RED SAGE

- Inhibits collagen synthesis
- Decreases proliferation of fibroblasts

# PATIENT SUCCESS

## Nodule Resolution in Dupuytren's Contracture Patient

*Ross Douglas, DC, CO*

*Testimonial from patient:*

“Dupuytren Contracture is a terrible disease, with a nodule growth on the ring finger palm of the hand, progressively contracting the finger inward into disuse, and one that medical doctors do not have good solutions. Each medical solution is horribly painful and fraught with side effects and complications.

Using the Gold Patches, first 10 years ago on my left hand and then in the last couple of months, with Dupuytren's showing up on my right hand, the Gold Patches fully, painlessly, simply, resolved the nodules, without any side effects. I am fortunate and privileged to have had access to this extremely efficient solution to an otherwise debilitating disease. Thank you, Wei Labs!”
