Infertility

Treatment Protocol

About one-third of infertility cases are due to male problems such as low sperm count, sperm that are abnormally shaped or that don't move correctly. Our MI (Male Infertility) formula is able to help improve sperm quantity and quality by increase the necessary nutritional supply to the male reproductive system. We recommend a 3 month treatment with MI Formula and suggest patients take sperm count analysis before and after the treatment to confirm the results.

The causes for female infertility can be varied. Cold uterus in Traditional Chinese Medicine term is characterized by dark menstrual blood, dark clotting and tissues, lower abdominal pain during menstrual period. Cold uterus can be one of the causes of female infertility because cold uterus patients have restricted blood and qi flow to the uterus. Our MayMay Capsule will help warm up the uterus, resolve the restriction of the blood and qi flow to the uterus and increase fertility. We recommend an initial treatment of 2 months for cold uterus condition. A further treatment may be required for patient to have a normal menstrual period, fresh blood with no pain that last about 3 days, to prepare the uterus ready for pregnancy.

Fibroid is one of the conditions leading to cold uterus. Fibroids that change the shape of the uterine cavity (submucous) or are within the cavity (intracavitary) decrease fertility significantly.

Miscarriage and abortion can also lead to cold uterus that causes infertility if there is scar formation inside the uterus.

Suggested Dosage

MI Formula: take 8 capsules, 3 times a day

MayMay Capsule: take 2 capsules, twice a day. Start after the period.

**Case: MayMay Capsules Aided in Treating Infertility,
Nancy Stern, DCAlbuquerque, NM 87114 United States**

Patient is a 36 year old women complained about infertility symptoms in 2006. She had been trying to get pregnant for a number of years.

Dr. Stern applied one treatment composed of energy healing and MayMay Capsules (practitioner did not even touch the patient).

The result has been remarkable. The patient became pregnant within a two months period after treatment and gave birth to a healthy baby boy.

Case: Several Wei Products Improved Issues with Infertility, Thyroid and Hormonal Imbalance, Brian Hess, DC, Culpeper, VA 22701 United States

Patient: 29 year old female

Complaints: Thyroid Cancer, Infertility

Supplements: B12, Thyroid 120, Fish Oil, Vitamin C, Calcium, Multivitamin

Infertility and irregular periods are due to a cold uterus condition. I recommended MayMay Capsules to improve the quality of the egg and promote regular cycles to prepare the reproductive tract for pregnancy.

The patient has taken herbs and supplements to treat her thyroid cancer in the past. I recommended she continue with Brown Juice, Qi Booster and Pearl Capsules because she had experienced moderate success. However, I did recommend additional treatments to support thyroid health.

Vertigo, dizziness, hormonal imbalance, and thyroid issues can be due to liver deficiency. I recommended a liver yin treatment to improve the liver structure and function. I also recommended Qi Booster Capsules to boost the patient's qi, which is often deficient in cancer patients. The liver and qi treatments were used concurrently with the uterus treatment.

Treatment duration: 1 month

Treatment results: Thyroid condition is greatly improved and patient became pregnant

Case: Successful Healing of Ovarian Dysfunction, Sed Rahimi, LAC/ND/Master Iridology, Thornhill, ON L3T2A7 Canada

A female patient of age 40 had been diagnosed with infertility (FSH=80/D3 of cycle; ESFR=40; low steroidal, low progesterone). She had been told by the clinic that she would need to adopt a child.

Dr. Rahimi started a combined treatment with Wei Laboratories MayMay and Liver Detox. After one and a half months of treatment with MayMay the patient did not have her cycle. Her medical doctor concluded three days later that the patient could have started her menopause. As a consequence, she went for a check up. The FSH had come down to 17. A few days later the woman was diagnosed to be pregnant. In the following months, she gave birth to a girl who is now six months old.

Dr. Rahimi successfully treated several women with signs for infertility. Based on the results she concluded that Wei Laboratories MayMay works very well for women under the age of 40 with stress and inflammation related to the oval cycle.
